DETAILED ACTION

Drawings

The drawings were received on 4/29/2002. These drawings are acceptable.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-3, 6-16 are rejected under 35 U.S.C. 102(e) as being anticipated by Stridsberg (US 6,191,415 B1).

Stridsberg reference discloses an optical device with all the limitations set forth in the claims, including: a rotating shaft having shaft movement parameters (column 1 lines 6-11); an incremental shaft encoder to convert the shaft movement parameters of the rotating shaft into differentially encoded electrical signals suitable for processing (column 1 lines 53-61); a first optical converter to convert the differentially encoded electrical signals into optical signals, and a plurality of optical conductors to carry the optical signals (column 19 lines 44-47); a second converter to receive the optical signal and convert it back to electrical signals for processing (column 19 lines 44-47); an

optical coupler configured to couple shaft movement parameters to the incremental shaft encoder (column 11 lines 36-44).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 4-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Stridsberg (US 6,191,415 B1).

Stridsberg reference discloses an optical device with all the limitations set forth in the claims as discussed above, except it does not explicitly teach transient over-voltage protection of differentially encoded electrical signals, and level shifting of the input voltage of the differentially encoded electrical signals.

However, transient over-voltage protection and level shifting of the input electrical signal voltage are well known in the art. Such features provide well-known advantages, in that they help to produce low-error transmission signals accurately representing the movement parameters of the measured rotating shaft movements. Therefore, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify Stridsberg device to implement transient over-voltage protection and level shifting of the input voltage of the differentially encoded electrical signals.
